Application/Control Number: 10/796,531

Art Unit: 1714

The supplemental amendment dated 4/13/07 and 4/11/07 have been received and entered. Applicants supplemental oath and declaration is also accepted as it incorporates priority information originally disclosed in the first paragraph of the specification. Applicant's first paragraph, however, contains incorrect patent number of the parent case. The correct number should be 6,590,0042

Although the applicant's claims were thought to be allowable, the examiner regrets that at this time, a double patenting rejection has been issued. All other prior art rejections are hereby overcome by applicant's amendment, since the prior art of record does not teach mixture of three accelerators in specific range of ratios of 3:3:1 to 4:4:1 or ratio range of 2.7:2.7:0.6. to 4:4:0.6.

## **Double Patenting**

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re* 

Application/Control Number: 10/796,531

Art Unit: 1714

Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 3-12, 14-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 6,590,042. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the following explanation.

Patented invention '042 discloses chemical composition for obtaining curable elastomeric material from cured or vulcanized rubber.

The composition of '042 contains mixture of three accelerators that match exactly the accelerators of the present invention. Although the ratios of the accelerators are not specifically described, the amounts in which accelerators are utilized are exactly the same, therefore the ratios of accelerators in the '042 are bound to be within the same range.

The additives of the issued patent such as zinc compounds, stearic compound and the like are also utilized in the same amounts.

The process disclosed in the present claims also shadows process of the issued patent '042. Mainly reducing the waste rubber into crumb or particles introducing the crumb into proper processing equipment and adding to it claimed chemical composition.

Application/Control Number: 10/796,531

Art Unit: 1714

Although the present invention does not disclose what types of rubber can be processed, the rubbers of '042 are widely utilized in articles such as tires, hoses and belts, which are vulcanized for use. Present invention encompasses all these rubbers.

In the light of the above disclosure it would have been obvious to one having ordinary skill in the art, that while practicing claims of the present invention one would arrive at already patented case 6,590,042.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Katarzyna Wyrozebski whose telephone number is (571) 272-1127. The examiner can normally be reached on Mon-Thurs 6:30 AM-4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 577-272-1000.
